

DOG PICK UP BAGS

The Good, Bad & Ugly!

Plant-based plastics are the future for single use for doggy doo bags! But no bags is even better!

Super Good

Find a re-useable container to scoop and carry dog poop to your home compost, loo, or organics pick up service

Good

Bio-based bags made from organic renewable sources like plant or wood waste. Make sure to choose certified compostable, as these will break down easily and quickly into water, carbon and soil.

Bad

Fossil-based bags are made from non-renewable materials. Their very durable polymer chains take many years to break down, meanwhile contaminating soil.

Ugly

Oxy-degradable bags have a huge negative environmental impact. They break down into microplastics which attracts toxins which attach to them contaminating the ecosystem. They're now banned in many countries.

WARNING

Why Certified Compostable?

These products have proven disintegration and biodegradation within a specific timeframe, they don't contain any toxic compounds AND they don't show any plant or soil invertebrate toxicity.

It is important compostable bags be sent to the compost pile because in landfills, compostable bags with dog poop in them don't have the right oxygen and moisture condition to break down properly!
